

The figure is a box plot comparing two groups: 'Control' (orange) and 'Treated' (green). The y-axis represents a numerical value ranging from 0 to 100, with major grid lines every 20 units. The 'Control' group (left) has a median around 75, with a box spanning from approximately 55 to 90. The 'Treated' group (right) has a median around 55, with a box spanning from approximately 45 to 65. Individual data points are overlaid on the box plots, showing the distribution of values for each group. The 'Control' group shows a wider range of values, including several outliers below the lower whisker, while the 'Treated' group shows a more compact distribution with fewer outliers.
